

# HD TIME-LAPSE VIDEO

## Bring your construction project to life

---

Suitable for any construction project, from new-build to demolition, Biosite's time-lapse video is the perfect solution to bring your construction project to life for communications and PR purposes.

Installation of time-lapse cameras provides project monitoring, with clear progress tracking enabling you to review your project and efficiencies and take action where needed. In addition, by producing a time-lapse video at key stages of the project you can showcase your achievements to your stakeholders.

Working in conjunction with you, Biosite will develop a solution that will meet your exact requirements.

## How it works

---

Biosite time-lapse installation typically consists of a single camera installed at a height to allow a wide view over the project.

Images are captured at a specified rate per hour. These are stored locally on site and also online via 4G to allow for remote viewing and download.

Optionally at stages suitable to you, the Biosite customer care team can generate videos or a presentation of the images taken.

## Benefits

- HD quality time-lapse video.
- Range of cameras available (5MP to 4K).
- Local and cloud storage of images.
- Configurable capture intervals.
- Customisable web page for online viewing – at any time from anywhere.
- Night time capture.
- Multiple camera installations.
- Regular time-lapse videos can be generated on demand.
- Post-production and video editing.
- Can be installed as part of Biosite CCTV solution or as a standalone unit.
- Ideal for PR use and communications with stakeholders.
