

## ONLINE INDUCTION

Quick - Efficient - Intuitive

### Improve health and safety, save time and reduce costs with Biosite's Online Induction

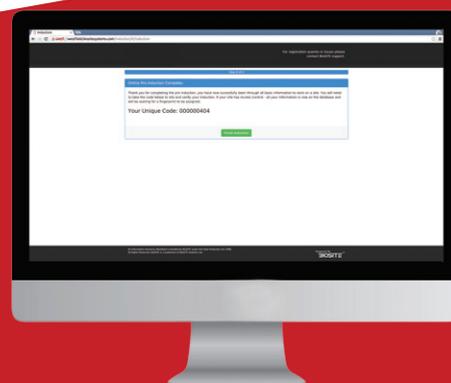

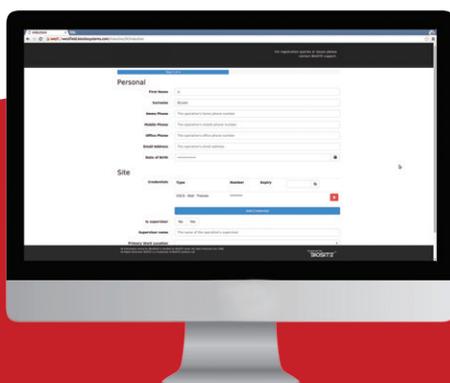

Designed and managed at group level to ensure consistent data capture across all sites, Biosite's online induction provides project management teams with a centralised place to manage the induction of subcontractors and their operatives.

The Online Induction walks operatives through general company health and safety policies, ensuring they have a good basic knowledge prior to arriving on site. Once on site, they will receive their site specific induction as usual, covering information such as site access points and specific hazards.

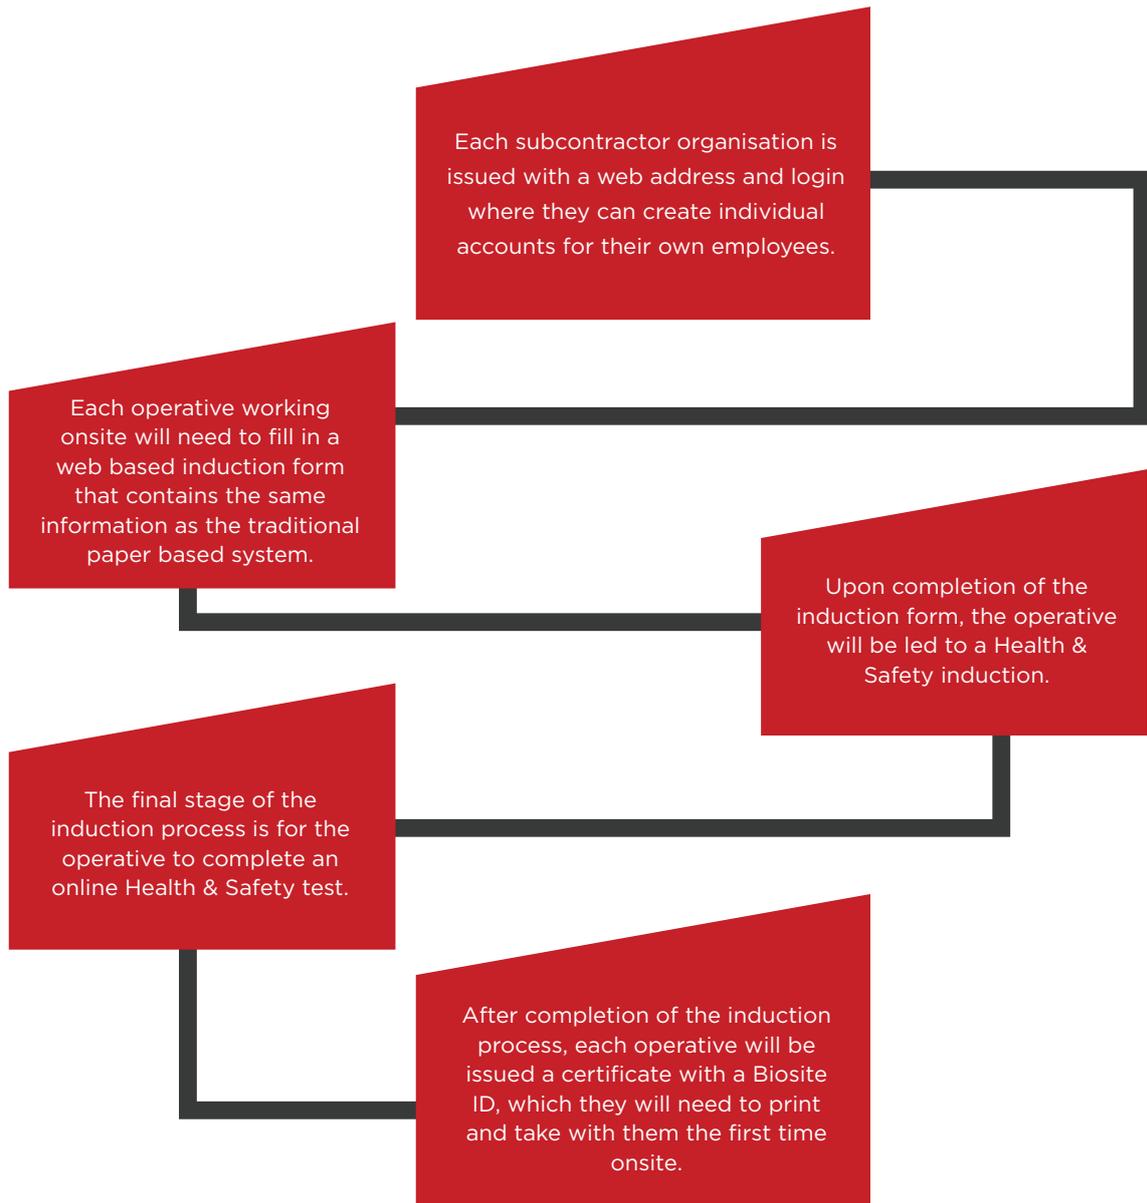

On average, the tool has proven to reduce the time it takes to carry out an onsite induction by 7%.

### Benefits include

- Subcontractors can pre-register all their operatives' details prior to arriving on site. Once registered, an operative can access all sites for that main contractor.
- Site operatives conduct induction process off site speeding up site familiarisation.
- 'Right to Work' document checker. If documents have expired the system will prevent entry.
- CSCS card checker linked to CSCS database - validating card holder before arrival at site.
- Valuable performance monitoring and measurement through centralised reporting.
- History of subcontractor organisation and employees logged.
- Reduce carbon footprint through the reduction in paperwork.

## How it works

By presenting the ID along with fingerprint information the previous training history of the individual will be automatically loaded to the local system for site management to refer to. Their access, accident, training records and any warning received can also be tracked and monitored centrally.
