

Biosite Mobile

Secure, reliable and accurate workforce management – on mobile.

The Biosite system, available on your mobile device.

Biosite Mobile utilises the latest facial recognition technology and NFC card scanning identification methods for highly accurate, secure and reliable management of construction operatives on site. Track time and attendance, manage movement between site zones and conduct health and safety checks – all in real time, whilst supporting effective site evacuation with the fire roll call feature.

Enhanced features at your fingertips

Designed for supervisors or nominated individuals, the Biosite Mobile app is ideal for situations where fixed access control points may not be suitable. These include linear or small sites, the start and end of works, and managing a subcontractor workforce.

- ✓ Manage your site workforce securely on mobile
- ✓ Record operative zone movements through security checkpoints
- ✓ Clock workers in and out of site using facial recognition
- ✓ Register new operatives to site
- ✓ Conduct operative 'spot checks' (access permissions, qualifications, health & safety)
- ✓ View operative qualifications, training and profile data
- ✓ Record training attendance
- ✓ Use the fire roll call feature to mark operatives as 'safe' in the event of emergency

Why Biosite Mobile?

Reliable access control and workforce management:

Enhance security and operational efficiency with real-time workforce management. Biosite Mobile offers reliable and secure identification methods, including facial recognition and NFC card scanning.

Focus on user experience:

Features an intuitive design that simplifies complex processes, making it accessible and easy to use for individuals at all technical levels.

Seamless integration with Biosite systems:

Experience the benefits of Biosite software on a mobile device, including effortless integration with existing Biosite software and hardware, as part of a holistic solution.

Adaptable for different use cases

Effective as a standalone solution:

Well-suited for projects where physical hardware is not viable, including smaller contractors or subcontractors who may not require extensive hardware setups. Gives clients the ability to manage operations efficiently with minimal infrastructure and experience the benefits of Biosite's workforce management software.

Indispensable supplementary tool alongside other Biosite products:

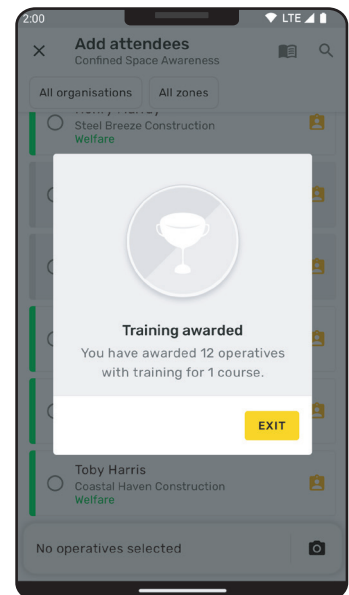

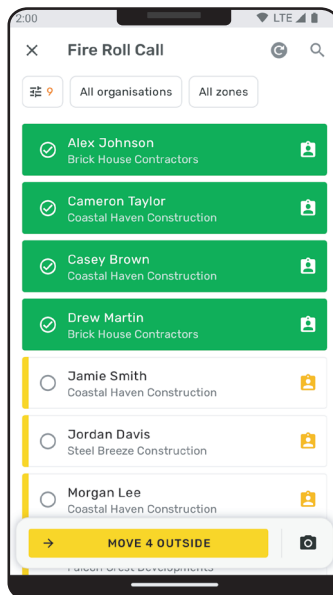

Enhance workforce management efficiency and accessibility, by managing workforce in real time.

Before and after Biosite hardware installation:

Delivers consistent management and reporting capabilities at start and end of works, maintaining full functionality across hardware installation stages - ideal for ongoing projects.

Emergency fire roll call:

In emergencies, the Biosite Mobile app provides a roll call by generating a list of all personnel on-site, enabling quick identification and safe, organised evacuation off-site.

Features and Benefits

- Workforce data at your fingertips, in real time
- Simple to use, with a focus on user experience
- Suitable for various site set ups and use cases as a standalone or integrated solution
- Integrates with existing Biosite software and hardware
- Quick operative identification via facial recognition
- Register operatives simply and efficiently
- Supervisor-led with tailored access permissions to suit individual site requirements
- Built with security in mind
- Cloud-based solution – data is not stored on the device
- Easily check operative qualifications, access and health & safety information
- Identify an operative who may not be able to communicate, for example in the event of a health and safety incident
- Assign and monitor operative training
- Supports site evacuation with fire roll call

Part of a market-leading portfolio

As part of ASSA ABLOY Group, the global leader in access solutions, Biosite provides a portfolio of innovative biometric access control and workforce management solutions for construction, with integrated solutions for fire safety, security and site management.

To deliver the best customer experience, Biosite has in-house R&D, manufacturing, installation and service teams and a nationwide network of engineers, as part of an end-to-end solution.
