

# Mosaic Mobile Competency Checks

Workforce skills, competencies and qualifications data at your fingertips.

Mosaic Mobile Competency Checks provides a mobile solution to ensure your workforce has the correct skills for the job, in real time.

### A solution for every site

Managing a highly transient workforce is particularly challenging on a large perimeter site or linear project with multiple sites, where it's not possible to have a fixed access point. In this scenario, a mobile competency solution is ideal

for capturing operative data at multiple points, via multiple devices including tablets, mobile apps or cards. This flexibility means an effective workforce management solution can be tailored for every site, no matter the perimeter considerations.

### Why Biosite?

#### Making the complex simple

Mosaic Mobile Competency Checks allows job roles and associated competency requirements (more commonly known as a skills matrix) to be created, imported and managed efficiently.

It can be set up at the project's inception, meaning you are ready to go as soon as the site becomes operational. Once you have accrued enough data from other projects you can also copy across the skills matrix to a new project file, cutting down on repetitive administration.

The system is designed to manage a transient workforce across many sites and cope with high churn rates.

It's ideal for joint venture projects, where multiple contractors need their workforces to be tracked using one system.

#### Skills gap analysis

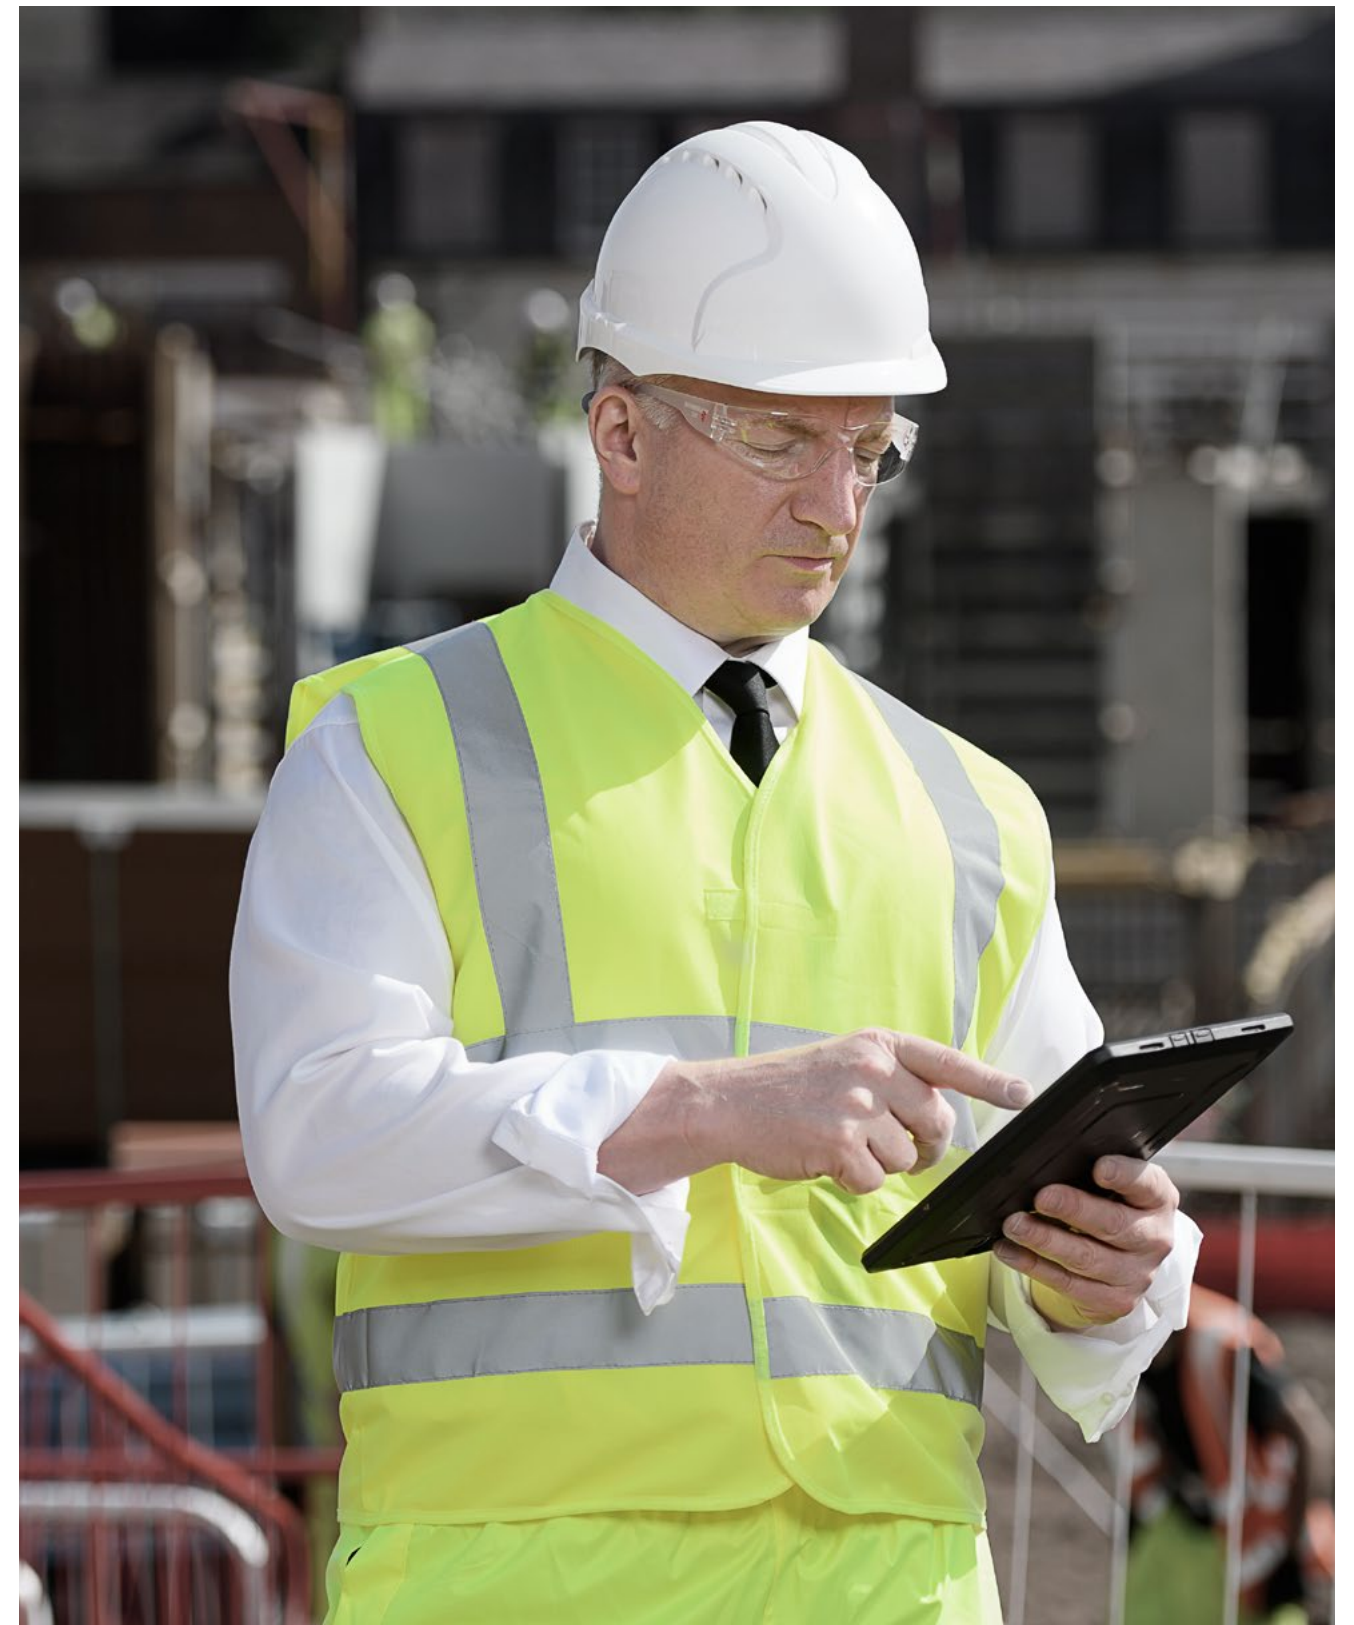

All trades and responsibilities on site can be managed effectively, as the system identifies if an operative is competent to perform their current role. Additionally, it will automatically flag up changes within their records, should any element expire.

Any skills gaps can be quickly identified at project and group level and the system can recommend other operatives on site that have the appropriate skills to help fill those gaps, as well as identify upcoming training requirements.

#### Integrates with Biosite Access Control and Mosaic Safety Briefing Manager

Mosaic Mobile Competency Checks can also be used in conjunction with Biosite's market-leading biometric Access Control system, providing a one person, one profile database of accurate operative history.

It also operates seamlessly with Mosaic Safety Briefing Manager, a feature that registers daily briefings, toolbox talks, safety alerts and other site critical information online.

## Features and benefits

- All qualifications stored safely and securely in one place
- Comprehensive, tailored reporting suite
- Pre-empts training requirements
- Automatic qualification and training expiry notifications
- Eliminates paper-based systems and reduces duplication costs
