

Sense

Biosite's business insight and reporting tool - Sense - converts real-time, quality data to enable better decision-making now and for the future.

Running a successful construction business is complex and challenging, especially managing a highly transient workforce. Sense utilises accurate biometric data to help deliver efficiency and cost savings by putting you in control.

Why Sense makes sense

Without business insight, it's challenging to have visibility of real-time events on site. This compromises the ability to act quickly, rectify issues, make efficiency savings and ensure quality and compliance, until after the event.

Building on Biosite's trusted access control and workforce management solutions, Sense provides a live overview of all operatives on site, including trades and skills.

Sense allows you to drill into real-time data, from a group level down to the operatives and activities of individual sites.

Harnessing data and creating insight will help transform how construction sites are managed. It makes sense.

Why Biosite?

Turns data into insight

Sense converts accurate data captured from Biosite's market-leading solutions, into a single source of credible insight, presented via an interactive dashboard. Tailored to your needs, the dashboard provides real-time assessment of information for improving workforce, project and supply chain management.

It enables powerful trend analysis from historical data, to identify subcontractors exhibiting high levels of churn and assesses the impact on productivity or quality of your build.

Sense also provides real-time information and alerts on safety critical operatives such as First Aiders and Fire Marshalls.

Uses your own data efficiently

Sense enables you to utilise data and create business insight with your own applications by making use of Biosite's open API.

Dramatically increases productivity

Sense will help you reduce manual data processing and paperwork – saving valuable time and establishing a true record of operative inductions, training, skills, qualifications, performance and more.

Simple and intuitive

Sense is flexible and easy to use, with a simple interactive dashboard entry point. It allows you to inspect and interact with your data how and when you want to.

Features and benefits

- The Sense dashboard allows updates to be managed at a group level, with amends cascaded to all sites
- Sense can generate exception reports with automated alerts, to minimise health and safety or compliance risk
- Corporate Social Responsibility (CSR) and Ethnicity, Diversity and Inclusion (EDI) information can be monitored, including apprenticeships and local labour usage
- Biosite maintains optimum performance and reliability using a combination of Cloud-based technology and locally-installed, site-based PCs. Regular, seamless synchronisation to the corporate portal ensures data is visible at group level
- Biosite is the data processor, with data held in its UK data centres; the data is owned by the customer
- Biosite is ISO 27001 certified, which ensures data is secure and GDPR-compliant
- Biosite provides an end-to-end solution, with in-house software development and dedicated manufacturing, software, installation and service teams, to deliver the best customer experience
