

Manned solutions for social distancing on site

Help maintain social distancing on site with the support of a Biosite welfare attendant to monitor communal areas.

Supporting social distancing on site

The latest industry guidance* recommends restricting the number of people using communal facilities on site at any one time with the use of a welfare attendant. Such areas include toilets, changing rooms and showers but the guidelines could also be applied to any areas on site where social distancing measures are recommended; for example, entrance and exit points (in addition to normal security requirements) and canteens.

Biosite welfare attendants can support social distancing by regulating operative numbers in communal areas, with the added benefit of being able to monitor staggered shift patterns if required. Putting you in control of your site.

*Construction Leadership Council's Site Operating Procedures guidance (version 3)

Trusted security solutions

Biosite operates a nationwide support network of specially trained and SIA approved contractor security guards and support officers linking back to a 24/7 dedicated control room. Biosite operatives can be deployed to protect operatives and assets on site, with the option of live GPS tracking and reporting via mobile device.

Safeguard your site now

Every site is different. To meet the specific support and security needs of each set-up, please contact your Biosite representative direct or email sales@biositesystems.com for more details.
