

CCTV & Remote Monitoring

A tailored technology solution, backed up with nationwide technical support and dedicated monitoring. Putting you in control.

Deter criminals, protect assets and keep your workforce safe on site with a bespoke CCTV and remote monitoring solution.

Effective site protection

Combining a high-performance product portfolio with out-of-hours remote monitoring, automatic checks and a nationwide network of support engineers, Biosite will help provide peace of mind that every site is protected.

State-of-the-art equipment acts as a perceived presence and deterrent on site, while live feeds link directly to Biosite's 24/7 control room and monitoring team, to keep sites running smoothly.

Tailored technology solutions

Biosite experts will conduct a thorough site inspection and neighbourhood analysis, before recommending a detailed product, installation and maintenance plan, including camera choice and placement.

- **Wireless motion-activated, battery-powered cameras (non-recorded)** are activated by the detection of movement and will take multiple pictures of the intruder. They act as a perceived presence and deterrent and are ideal for monitoring site entrances and exits.
 - **Hardwired Pan Tilt Zoom (PTZ) cameras (recorded)** also act as a deterrent and the footage can support criminal prosecutions, with the added benefit of being able to adjust camera direction remotely and zoom in or out on construction works in progress.
 - **PIR movement sensors with PA (Public Address) horn speakers** provide an audible deterrent with a pre-recorded message, remotely accessed from our state-of-the-art control centre.
-

Why Biosite?

Tailored solutions

Biosite will tailor a solution to meet the needs of every site, with bespoke equipment design, installation and maintenance. A selection of state-of-the-art equipment – including temporary and remotely monitored options – is available to suit every need and our experts will recommend a solution following a site visit and consultation.

Dedicated 24/7 control room

Biosite CCTV systems link back to a dedicated in-house control centre, with a monitoring team stationed to review live footage and respond to incidents in-line with an established incident protocol. Biosite's out-of-hours remote monitoring service is available round-the-clock, 365 days a year, for complete peace of mind.

Nationwide service support

From initial consultation and installation to ongoing maintenance and monitoring, Biosite's fleet of engineers, in-house support team and control room operators are on hand to ensure long-term, effective performance.

Part of an end-to-end security solution

Alongside CCTV and remote monitoring, Biosite Security provides a total solution for site security, including manned guarding, welfare attendants, mobile patrols and support services.

Features and benefits

- Bespoke design, installation and maintenance solutions tailored for every site.
- High-performance product portfolio, including temporary and remotely monitored options.
- Neighbourhood analysis to identify site specific factors and risk.
- Detailed recommendations on CCTV camera choice and placement.
- Dedicated team of Biosite engineers located around the UK to provide round-the-clock support
- Automatic internet monitoring checks all detectors and cameras are online.
- All site activity is recorded 24/7/365, with automatic monitoring software ensuring the system is online*.
- A Biosite response officer holds keys and will take appropriate action when alarm is triggered.
- Any changes to the system (such as camera placement) are communicated to the monitoring team, to ensure they have a thorough understanding of the site.

*The effectiveness of remote monitoring is limited by site internet speed and reliability
